Health & Rehabilitation Center

**CHANGING THE WAY**  
*you experience healthcare*

Our residents and patients will be served by staff trained to meet the unique and specialized needs of each individual.

State of the art technology has been interlaced throughout the facility. Mobile resident charting allows clinicians to capture data right at the bedside. Physicians can access patient information from any location on a moment's notice. This technology allows clinicians substantially less time with administrative paperwork and more time with patients and families.

## **SHORT-TERM REHAB**

Designed specifically for “patient-centered” care, we will offer an extensive range of rehabilitative services. After a stay in the hospital patients may only require short-term rehabilitation or short-term skilled nursing care. The goal is to return home or to a residential care environment. We are dedicated to providing a “culture of rehabilitation” for patients to maximize improvement of health and wellness.

## **SKILLED NURSING**

Our center will provide skilled nursing care and other comprehensive services to those requiring a greater level of care than that offered by assisted living facilities. With 24-hour nursing care and many of the comforts of home, we seek to balance quality care and quality of life. Promoting autonomy and choice, we will offer a variety of services, social activities, and recreational opportunities.

## **SERVICES**

This facility will be Medicare certified and equipped to provide a full range of transitional medical and rehabilitation services, including:

### **COMPREHENSIVE REHABILITATION**

- Orthopedic rehabilitation
  - Amputation care
  - Hip/knee replacement
- Pulmonary rehabilitation
  - CPAP/BIPAP
  - Chronic obstructive pulmonary disease
- Neurological rehabilitation
  - Cerebral vascular accident
  - Multiple sclerosis
  - Guillain-Barre syndrome
  - Parkinson's
